EWN-Y

Electromagnetic metering pumps with precise flow monitoring,

The EWN-Y electromagnetic pump combined with EFS flow sensor (option) provides accurate real time control & display of dosing rate.

The required flow rate is simply input to the pump. Through feedback from the EFS sensor, the pump constantly adjusts its speed to maintain the set dosing rate - even under changing temperature, viscosity, or suction & discharge pressure conditions.

The EFS is mounted directly on the pump to digitally display dosing rate per minute or hour - ALL WITHOUT ANY CALIBRATION.

The EWN-Y gives a proportional 4-20mA output signal of dosing rate and displays operating history such as total flow volume and power-on time.

EWN-Y
With EFS flow sensor (option)

feedback & control

Displaying flow rate

Pump flow rate may be displayed. In case the EFS flow sensor (option) is installed, the EWN-Y pump can display accurate real time flow rate without any calibration.

Feedback control (with EFS)

Flow rate monitoring of individual strokes by the EFS sensor enable fast response feed back control. The feedback control maintains the set capacity by manually or externally with analog input signal.

Discharge detection

Direct connection to the IWAKI FCP or FCM flow counter (excluding certain low- pressure models) allows effective monitoring of pump discharge (number of shots). Gas lock, abnormal pressure (only with FCP), etc., are also detectable.

Alarm output and analog output functions are provided as standard function

Two types of alarm outputs and analog output are provided as standard functions. The analog output can be used for flow rate monitoring.

Waterproof structure (IP65)

With the aim of improving resistance to exposure to liquid, the controller unit is installed on the back of the pump and the control panel is protected with a cover as standard equipment.

A rubber gasket is provided between the pump head and the bracket to prevent water from entering from the periphery of the pump head.

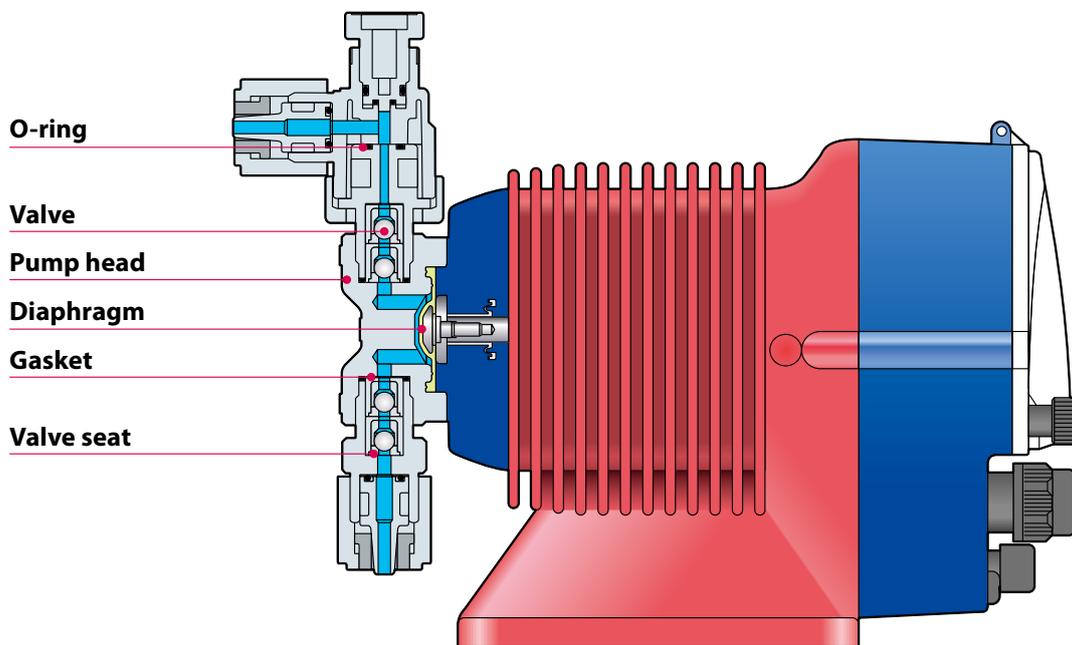

Multi hose connection

The use of a new hose stopper eliminates a twist in tube connection.

- Each discharge capacity shown above is at discharge pressure (stroke length 100%, stroke rate 100%) and increases as a discharge pressure reduces.
- The performance is based on pumping clean water at ambient temperature at rated voltage.
- Liquid temperature -VC/VH types: -10 to 40°C -PC/PH/FC/SH/TC types: -10 to 60°C
- Max pressure is not guaranteed under any discharge condition. Max pressure of PVC type is 1.2MPa. Please contact us for details.

Accessories

• Check valve CAN / CBN / CS

This has the function of a non-return valve and prevents siphon and overfeed.

CAN: Available in PVC and GFRPP.

CBN: In-line type to be connected in the middle of a hose; made of PVC.

CS: Made of stainless steel for SH type.
