

Magnetic drive process pump resistant to dry run damage

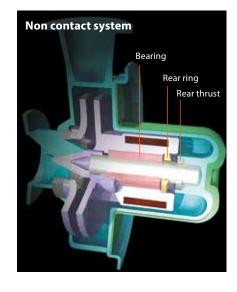

The MDM Series of Magnetic drive process pumps have wetted parts made of fluororesin. Natural PFA and CFRETFE being standard materials of construction. The MDM features a unique mechanism which gives a greatly improved performance against dry running (Non contact system). Applications cover a wide range of chemical process duties from acid to alkali together with high purity chemicals for the semiconductor industry.

Unique design prevents dry running

(Non contact system) (PAT.)

The pump design features a mechanism to withstand dry running. High magnet power of the rare earth magnets prevents the magnet capsule coming into contact with the thrust ring of the rear casing, thus preventing melting of fluororesin components due to heat generation. This greatly improves resistance against dry running in comparison with conventional magnetic drive pumps made of fluororesin.

Note: Only CF type (fitted with high density carbon bearing) can cope with dry running. Dry running is not permitted in the case of KK type.

ETFE and PFA available in standard models

Carbon fibre reinforced CFRETFE and PFA linings can be supplied to meet many varying duties. PFA being a natural unfilled material generates fewer contaminants and makes it ideally suited for transfer of high purity chemicals.

Note: Long coupling type is only PFA version.

Highly durable structure

A ductile cast iron shell adds strength and durability to the outer peripheral surfaces of the fluororesin pump module. The rear casing which is placed under the highest stress is protected by a rear casing cover made from fibre reinforced plastic. This gives sufficient strength and eliminates the eddy current loss caused by the rotating magnetic field. Should it come into contact with the drive magnet unit, no spark would be generated and a high level of safety would be maintained.

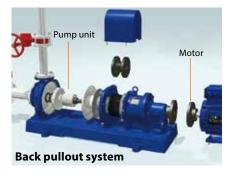

Back pullout system

In order to facilitate inspection and maintenance, this series employs the back pullout system. This enables one to conduct inspections internally and replace parts without removing piping. The pump is designed to include safety measures that can prevent the liquid from leaking when the foot support (bracket) is pulled back.

Compliance with ISO standards (ISO2858/DIN EN22858)

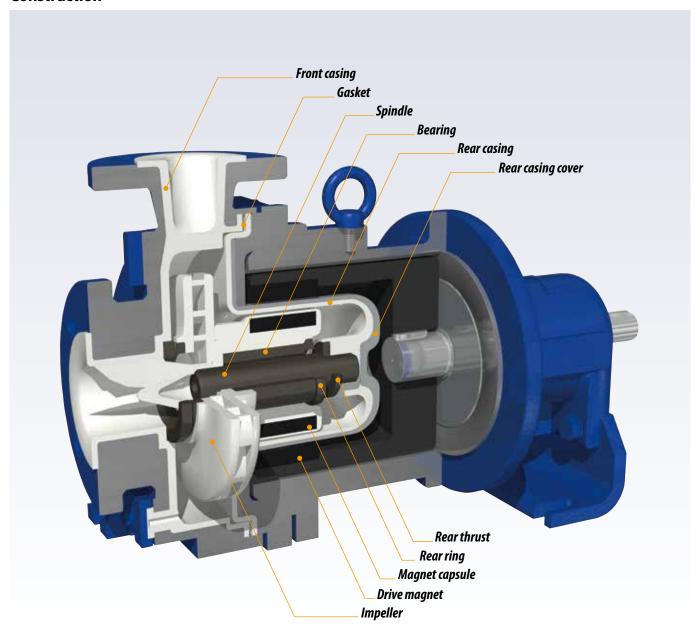

The pump with a common base complies with ISO Standards in regard to piping connection.

Note 1: For compatibility in size with other series of our magnet pumps, please call us. Note 2: ANSI and JIS standards are also available. For details, please call us.

Construction

	Materials	ECF	EKK	PKK/NI
1	Front casing	_		
2		CFRETFE		PFA
3	Impeller	CFREIFE		FIA
4	Magnet capsule			
5	Bearing	High density carbon		
6	Spindle	High purity	SiC	
7	Liner ring	alumina ceramic		SiC
8	Mouth ring	PTFE (with Filler)		
9	Rear ring	High purity alumina ceramic		
10	Rear thrust	PTFE (with filler)		DTEE
11	Gasket	PTFE		PTFE

Front casing ETFE type

A moulding made of carbon fibre reinforced CFRETFE. It has both a high mechanical strength and excellent corrosion resistance. The outer peripheral surfaces are reinforced by a ductile cast iron outer casing in order to achieve excellent strength and durability.

CFRETFE type

Front casing PFA type

Natural PFA fluororesin is adapted as wetted parts. This construction is free from contamination and ideal for transfer of clean liquids or with less particle generation.

PFA type

Impeller

Closed type impellers are designed to give high efficiency. To ensure positive fixing of impeller to magnet capsule a spline system together with a pin fixing is employed. This prevents the impeller from moving axially off the magnet capsule (PAT.). MDM25 and 32 models now have impellers capable of reaching max. heads of 74 meters (50Hz) to widen the range of application.

CFRETFE type

PFA type

Rear casing Rear casing cover

The fluororesin rear casing is strengthened by the outer rear casing cover which is manufactured in fibre reinforced plastic capable of withstanding a pressure of 1 MPa. (Note: For long coupling type, maximum pressure is 1.6MPa.)

This structure also eliminates any eddy current losses due to a rotating magnetic field. It also prevents sparks from being produced should the rear casing come into contact with the drive magnet unit.

PFA type with rear casing cover

A newly developed triple-layer casing (PAT.) is used for the high head models MDM25-3 and 32-2 when liquid temperature exceeds 80°C. This new design allows a rated 1.6MPa casing pressure overall temperature range. Since the front and rear casings are bolted together from the front casing side liquid does not leak out when the foot support (bracket) is pulled back.

Rear ring

To protect the pump against abnormal operation, such as cavitation or entrained air, where the magnet capsule could expereince reverse axial thrust, a rear ring and rear thrust ring are used. The rear ring is designed to minimize heat generation compared to conventional designs. This prevents surrounding fluororesin from melting. (PAT.)

Rear Thrust

The rear thrust withstands axial loads encountered from abnormal operation, it also minimizes heat generation.

Magnet capsule

High strength rare earth magnets are totally encapsulated with fluororesin mouldings. Magnets are small and lightweight which increases the efficiency of the pump. Taking advantage of the high magnetic strength its new design of "Non contact system"(PAT.) was developed to protect pump from dry running. This enables us to offer pumps that will withstand dry running operation. (CF type only)

CFRETFE type

PFA type

Spindle

Both ends of the spindle are supported by the front casing and the rear casing (the fixed spindle type). There are two types of spindle; one is made of high purity alumina ceramic and the other made of SiC.

SiC type High purity alumina ceramic

Bearing

Two standard bearing materials are available. SiC gives high resistance to abrasion. High density carbon withstands dry running operation. Bearings can be individually replaced.

SiC type High density carbon type

Gasket

A PTFE shrouded gasket is used to enhance sealing performance and corrosion resistance.
